We do rapid construction of ultra-high strength secure structures such as:

- Aircraft hangars (pictured above)
- Warehousing
- Factories
- Storage facilities
- Garage units
- Agri-stores
- Boundary walls

A combination of high-strength precast concrete & steel roof trusses is used for construction:

- 150mm thick 50MPa concrete wall panels up to 8.5m wide.
- 150mm wide 40MPa concrete columns up to 6m tall.
- Precast concrete foundations.
- Steel roof structure & IBR roof sheets to the client's specification.
- Roller shutter, tilt up or sliding steel doors can be installed.

Typically, construction cost remains the same as conventional construction methods. However, SECURI-WALL structures can be erected up to 2.5x faster and with substantially less labour.
