

## MINING CRISIS

The Zama Zamas phenomenon causes an estimated annual loss of R21 billion to South Africa's mining industry. Controlled by criminal syndicates, these illegal miners bring economic devastation, violence and threats to nearby communities.

## ENFORCEMENT FAILURES

Law enforcement struggles to curb these crimes due to weak legal frameworks. Environmental damage, including sinkholes, mercury pollution and water contamination, further worsens the situation. Despite advanced access control, traditional perimeter defences fail, leaving mining sites vulnerable.

## SECURE PERIMETERS

SECURI-WALL offers a breach-resistant solution to secure mining perimeters, safeguarding assets, preventing environmental harm and protecting communities from criminal activities.
